#### DATA TABLE 16

# Irrigated Area, by Region, 1961 to 2003

## Description

Total irrigated areas by continental region are listed here for 1961, 1965, 1970, 1975, 1980, 1985, 1990, 1995, 2000, and 2003, the latest year for which reliable data are available. Units are thousands of hectares. After 1990, all irrigated area in the former USSR is split between Europe and Asia. These data have been updated from previous volumes of *The World's Water* to correct misreporting and changes to the UN Food and Agriculture Organization FAOSTAT database.

Figure DT 16.1 shows total irrigated area plotted over this time period. Although irrigated area has continued to increase, it is now increasing at a rate slower than population. As a result, per capita irrigated area is declining.

### Limitations

These data depend on in-country surveys, national reports, and estimates by the UN Food and Agriculture Organization. In some regions, multiple cropping may increase the apparent area in production. These data are not reported here. No information is offered about the quality of the land in production. Changes in political borders and the independence of several countries make certain continental time-series comparisons misleading. Data for the Soviet Union, Yugoslavia, and Czechoslovakia are provided through 1990; thereafter, the irrigated areas of the newly independent states are reported. When summing by continental area, however, trends will appear misleading because some of the newly independent states are now included in Asia, whereas others are in Europe. Thus, meaningful time-series trends, by continent, cannot be seen for these areas. The time-series for Africa, North and Central America, South America, and Oceania do not suffer from this problem.
