## Total Renewable Freshwater Supply by Country (2013 Update)

## Description

Average annual renewable freshwater resources are listed by country, updating data table 1 in the previous versions of *The World's Water*. Data in this table from the AQUASTAT database of the Food and Agriculture Organization of the United Nations (FAO) were updated to reflect the most recent data in that database as of May 2013. However, because these data are typically produced by modeling or estimation, rather than measurement, we continue to use data from other sources where appropriate (even if older than data in AQUASTAT). For example, most data for European countries come from the Eurostat data set of the European Union. Data for Timor-Leste and for the Occupied Palestinian Territory (as defined by AQUASTAT) were added in this volume.

Data in this table typically comprise both renewable surface water and groundwater supplies, including surface inflows from neighboring countries. The FAO refers to this as total natural renewable water resources. Flows to other countries are not subtracted from these numbers. All quantities are in cubic kilometers per year (km³/yr). These data represent average freshwater resources in a country—actual annual renewable supply will vary from year to year.

## Limitations

These detailed country data should be viewed, and used, with caution. The data come from different sources and were estimated over different periods. Many countries do not directly measure or report internal water resources data, so some of these entries were produced using indirect methods.

Not all of the annual renewable water supply is available for use by the countries to which it is credited here; some flows are committed to downstream users. For example, under treaty requirements, Sudan must pass significant flows downstream to Egypt. Other countries, such as Turkey, Syria, and France, to name only a few, also pass significant amounts of water to other users. The annual average figures hide large seasonal, interannual, and long-term variations.

## Sources

The 2013 update was compiled by P. H. Gleick, Pacific Institute.

When a recent source uses older data previously cited here, we have tried to leave the original citation date and source.
